

**PURPOSE:**

To define the best practices for implementing and using *Hygenall® FieldWash™*

**POLICY:**

*Hygenall® FieldWash™* should be used in replacement of all current soap and personal washing hygiene products.

**GENERAL:**

- Place at sinks in the kitchen, and bathroom or anywhere regular soap would be. Replaces regular soap for daily handwashing.
- Place in showers and use from head to toe, use before you use any personal products.
- Do not mix with regular soap.
- Use *Hygenall® FieldWash™* to decontaminate full body, including hair, first and then follow with personal products if desired.
- It is a good practice to treat exposure to toxins from firefighting and training just like you would treat germs.
- Use *Hygenall® FieldWash™* as soon as possible when coming back to the station after being in or near an IDLH atmosphere.
- Note: *FieldWash™ has the same germ killing ability as any regular soap and safe to use for daily showering and handwashing.*
