

Fire  Dex®

DEX-RESCUE GLOVE

- The only non-structural glove certified to NFPA 1951
- Superior cut, abrasion, and puncture resistance
- Perfect for technical rescue applications

Top Grain Cowhide Reinforced Palms - Specially treated 3oz top grain cowhide tanned with a proprietary blend of silicone and other additives is designed to keep the glove soft after repeated wet/dry cycles.

Silicone Coated Kevlar Palms – provides superior cut, puncture and abrasion protection and passes the ANSI Cut Level 5 testing while providing excellent grip.

Pig Leather Back – A soft, durable, and breathable material that enhances abrasion/puncture resistance.

Goat Skin Leather – This allows for screen touch capabilities with your index finger and thumb while improving dexterity on the scene.

KEYSTONE THUMB DESIGN

Naturally bent fingers made to reduce restriction and minimize hand fatigue.

The keystone thumb is the most ergonomic thumb design

- Stitched separately into the palm area
- Highly flexible
- 360-degree range of motion

Rollover Fingertips

Traditional fire service gloves incorporate bulky seams at the tip of the finger. This leads to decreased sensation in the finger.

Tactility is needed the most on the fingertips, so the seam is placed on the back of the finger.

Impact Guards

Made with sturdy knuckle and finger guards to reduce impacts, prevent cuts, abrasions, and punctures.

**Designed with goat skin leather,
use your mobile device with your
index finger and thumb.**
